cPanel & WHM version 110 will be the last version that supports CentOS 7. The Extended Lifecycle Support program extends CentOS 7 support with cPanel & WHM version 110 to January 1, 2026. Read more about this program in the [Extended Lifecycle Support OSES](#) blog post. We encourage you to migrate to a supported operating system as soon as possible.

Click the "Elevate to AlmaLinux 8" button below to read about a script you can use to upgrade cPanel & WHM installations on CentOS 7 to AlmaLinux 8. Only system administrators (root and root-level resellers) see this message.

Elevate to AlmaLinux 8

Favorites Edit Favorites

List Accounts
This interface lists your server's accounts and lets you perform certain actions on them.

Create a New Account
This interface lets you create new cPanel accounts.

Terminal
This interface provides an in-browser terminal for direct command line access within a WHM session.

Process Manager
This interface displays your server's active processes and lets you trace and kill any processes.

DNS Zone Manager
Manage DNS zones, including adding and removing records from a zone.

Mail Queue Manager
This interface lets you view, delete, and attempt to deliver queued messages that the system has not yet delivered to their destinations.
